**REGULATORY AGENCY DATABASE REPORT**

The following regulatory agency database report was obtained and reviewed to help establish whether contamination incidents have been reported within the site vicinity. A list of the database sources reviewed, a detailed description of the sources, and a radius map indicating the location of the reported facilities relative to the project site are included in the report.

The information presented is obtained from a variety of public databases and other sources. No warranty or representation is made regarding the accuracy or completeness of the presented data. In some cases, a listed facility cannot be mapped with confidence, but instead may be located only by city or zip code. These unmappable sites are referred to as "orphan" sites and, if present, they are listed in the database report.

## EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

### SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

### FEDERAL RECORDS

**NPL:** Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 10/14/2005 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

Site Description: Travis Air Force Base (AFB) is located midway between San Francisco and Sacramento, California, about 3 miles east of downtown Fairfield in Solano County. The Base occupies about 6,383 acres. In addition, the Base maintains ownership of or administrative control over 11 annexes at off-base locations. Approximately 17,000 military and civilian personnel are present daily on the Base. Travis AFB is currently part of the Air Mobility Command (AMC) and is host to the 60th Air Mobility Wing (AMW). The AMW operates C-5 Galaxy cargo aircraft and KC-10 Extender refueling aircraft. The primary missions of Travis AFB since its establishment have been strategic reconnaissance and airlift of freight and troops. Travis AFB occupies about 6,383 acres of land near the center of Solano County, California, and is located approximately 3 miles east of downtown Fairfield and 8 miles south of downtown Vacaville. Solano County's population in 1990 was 340,421. This population was estimated to have grown to 373,923 by 1994. During the 1980s, the population of Solano County increased nearly 45 percent. However, the rate of growth has declined since 1990. The projected population growth between 1990 and 2000 is 47.4 percent for the City of Fairfield and 33.6 percent for Solano County overall. According to the Travis AFB Office of Public Affairs, Travis AFB currently employs about 7,750 active military personnel and 3,323 reservists. Approximately 5,613 people live in 3,466 on-base housing units. There are 3,006 civilians employed at Travis AFB. Approximately 17,000 people are on base on a daily basis.

The West/Annexes/Basewide Operable Unit (WABOU) is located on the western flank of the truncated anticline that traverses Travis AFB in a nor thwesterly to southeasterly direction. The axis of the anticline runs through the East Industrial Operable Unit (EIOU) near Facility 363, about 2 miles east of the WABOU boundary. Early Eocene Epoch Domengine Sandstone, which is the oldest sedi  
mentary unit exposed at the Base, is exposed along the axis of the anticline. The WABOU consists of the following facilities and areas: Building 755 is the Travis AFB Battery and Electric Shop. The site consists of Building 755 and a former batter y neutralization sump. Past operations have included the recharging and dismantling of lead-acid and nickel-cadmium batteries. Before 1978, lead acid solutions were discharged into a sink inside Building 755. The pipeline from the sink led to a rock filled sump approximately 65 feet northwest of the building. This practice was discontinued in 1978 when the pipeline was dismantled and reconnected to the sanitary sewer system. The sump was removed in 1993. Building 905 is the Travis AFB Entomolog y Shop used to prepare pesticide and herbicide mixtures from 1983 to 1992. A 3,000-square-foot fenced enclosure outside on the east side of the building contains a washrack and a storage area. The purpose of the washrack was to wash down tractors use d for towing bowsters filled with pesticides and herbicides. The washrack consisted of a concrete pad with a perimeter berm (i.e., curb) and a drain that discharged to an underground storage tank (UST). The surface soil appears to have received pestic ide residue from spray generated during the washing of pesticide applicator vehicles under windy conditions or spillage during transfer of liquids from the UST to drums. Building 916 is an emergency electrical power facility. The diesel-powered gene rators inside the building sit above a cellar, or sump area, that also houses sump pumps. Prior to 1991, spilled diesel fuel from the generators and wash water were pumped out of the building through one of four pipes. The pipes discharged onto small concrete spillways constructed for erosion control on the side slope of the trapezoidal drainage channel that lies east of the building. From the spillways, wastewater flowed down the side-slope and into the drainage channel. This method of s  
ump water disposal was discontinued in 1991. Building 929 is a small storage shed, 12 feet by 12 feet, completely enclosed with a concrete floor, currently used to store paint. Building 931, a maintenance facility for portable electrical generators , is located approximately 100 feet southeast of Building 929. A former drum storage area, or Hazardous Waste Accumulation Area (HWAA), is located immediately to the west of Building 929. The HWAA stored waste materials generated at Building 931. Bot h buildings drain to the adjacent channel. Semivolatile organic chemicals (SVOCs) and metals have accumulated in the channel sediment. Building 940, located approximately 400 feet southeast of Building 929, was formerly used as a painting and paint-d rying area for large equipment, and possibly components of nuclear weapons from 1953 to 1962. Landfill 3 consists of trenches used in the 1970s for the disposal of pesticide containers. Landfill 3 is located within the Weapons Storage Area (Bunker A ) in the western portion of the WABOU. Bunker A is a secured area and is surrounded by fences. This landfill comprises about 1 acre of land, as indicated by the trenches excavated during the WABOU Remedial Investigation (RI). The trenches are current ly covered with fill material. Landfill X comprises approximately 25 acres of undeveloped land located within Grazing Management Unit (GMU)-2, a 126-acre parcel of land used to

graze horses. Limited information regarding past activities at Landfill X is available. It was reportedly used for disposal of used aircraft tires in the early 1960s. The tires have since been removed. Construction debris is mixed with soil in one portion of the site. In 1985, horses that were grazing became ill and were moved. The horses recovered and the area has not been used for grazing since. The Former Small Arms Range comprises 2.8 acres of flat, grassy terrain; no traces of previous firing range activities are visible. Periodically the site is disked.

The location of the site was determined from historical photographs. The Railhead Munitions Staging Area site consists of a railroad track and concrete pad that formerly served as a railhead at the south terminus of a spur off the Northern Sacramento Railroad. This site served as a weapons-handling facility from 1953 to 1962. Annex 10 is an active facility consisting of an 18-hole golf course with an associated maintenance yard, and the Travis AFB water supply wellfield. The maintenance yard was constructed in 1974 and includes several buildings, garages, and storage areas. It also has several concrete pads used for cleaning and servicing vehicles and mixing herbicides and pesticides. Radioactive Burial Site 2/ Dry Waste Landfill (RW0 13) site consists of a fenced backfilled trench, approximately 50 feet by 100 feet. This area was formerly used to bury low-level radioactive wastes generated during maintenance activities for nuclear weapons. CERCLA was passed in 1980 and amended by SARA in 1986. This law established a program to remediate sites contaminated with hazardous constituents to protect public health and the environment. CERCLA established a series of steps to investigate site contamination and design and implement appropriate remedial actions at these sites. The major steps of the CERCLA process are described below. The Remedial Investigation (RI) I is used to collect data to characterize site conditions, to determine the nature of the waste, and to assess risk to human health and the environment. The WABOU RI used a phased and sequenced approach to minimize collection of unnecessary data and maximize data quality. Initial data collection efforts provided a basic understanding of site characteristics. As this basic understanding was achieved, subsequent data collection efforts focused on filling identified data gaps in the conceptual site model and gathering the information necessary to support evaluations of remedial alternatives. The results and conclusions of this investigation were published in the WABOU RI report. The Feasibility Study (FS) is divided into three general phases: development of alternatives, screening of alternatives, and detailed analysis of alternatives. In the first phase the technology types and process options available to implement the general response actions for contaminated soil and groundwater were defined. A technology implementability screening was conducted that provided the basis for the selection of representative process options for soil and groundwater remediation. In the second phase the remedial alternatives were assembled using the representative process options and the site-specific conditions in the WABOU. In the last phase the alternatives were evaluated against seven of the nine CERCLA criteria. The WABOU FS provided a comparative analysis of alternatives to identify the advantages and disadvantages of each alternative to assist the decision making process. The results of this study were published in the WABOU FS. The Proposed Plan (PP) presents to the public the preferred alternative for each site and the rationale for the preferences. The WABOU Soil PP gave the public an opportunity to

comment on the preferred soil alternatives during a 30-day public comment period. All community members on the Travis AFB Community Relations list received a copy of the PP just prior to the start of the public comment period. The Air Force formally presented the preferred soil alternatives to the public at the July 23, 1998 public meeting. The Air Force also published a fact sheet in February 2000 to describe major changes to two of the soil remedial actions. The WABOU fact sheet gave the public an opportunity to comment on these changes during a 30-day public comment period. All community members on the Travis AFB Community Relations list received a copy of the fact sheet just prior to the start of the public comment period. The Air Force formally presented the changes to the public at the March 15, 2000 public meeting. The Air Force has also published a WABOU Groundwater PP that presented the preferred alternatives for the WABOU groundwater sites. A separate 30-day public comment period and public meeting was held to promote public participation in the decision making process. A Record of Decision (ROD) addressing operable unit 4 (OU4) was completed in December 2002. This ROD presents the selected alternative and final cleanup levels at each soil site. It summarizes all CERCLA activities at each soil site and documents that the Air Force and the regulatory agencies are in agreement as to how the cleanup is to take place. The Groundwater Interim Record of Decision (IROD) for the WABOU describes the remedial actions for the groundwater sites. A Record of Decision addressing OU 4 was completed in December 2002.

Summary Details:

Conditions at proposal July 14, 1989): Travis Air Force Base covers 5,025 acres in Solano County, California. The base is 3 miles east of the City of Fairfield. The area around the base is primarily agricultural. Established in 1943, the base is near one of the largest and busiest bases in the Military Airlift Command. It consists largely of runways and related installations. Industrial operations include various shops where aircraft components were cleaned with solvents. Travis Air Force Base is participating in the Installation Restoration Program (IRP), established in 1978. Under this program, the Department of Defense seeks to identify, investigate, and clean up contamination from hazardous materials. As part of IRP, the Air Force has identified a number of potentially contaminated areas, including three landfills used during 1943-77, of which one (Landfill No. 3) was used for disposal of crushed and rinsed pesticide containers, as well as the rinseate; areas where combustible wastes were burned for fire fighting exercises from 1943 to the mid 1970s; a pit where about 250 pounds of cyanide were buried in about 1967; a solvent spill area where methyl ethyl ketone, toluene, and tetraethylene glycol dimethyl ether may have been spilled during paint stripping operations; and the storm sewer system, one of the most contaminated portions of the base, where chemical wastes from the various shops were dumped throughout the history of the base. The old decommissioned sewage treatment plant is also of concern because cracked oxidation ponds may have contaminated the ground water below with pesticides and industrial chemicals. Endrin, benene, 1,1,1 trichloroethane, tetrachloroethylene, and 1,1 dichloroethane were detected in monitoring wells in different parts of the base, according to a 1986 IRP report. An estimated 400 people obtain drinking water from wells within 3 miles of hazardous substances on the base; the nearest well is 3,400 feet from the base. 1,1 trichloroethane, benene, chlorobene, 1,1,2,2 tetrachloroethane, and trans 1,2 dichloroethylene were detected in the storm sewers, according to the 1986 IRP report, and chlorobene was detected in Union Creek, which is routed

through the base via the storm drain system. A spill of jet fuel in 1978 killed all aquatic wildlife along 2 miles of Union Creek. The creek flows 1.1 miles to Hill Slough, which is a branch of Suisun Marsh, a major coastal wetland. Because Hill Slough is tidally influenced, any contamination can reach San Francisco Bay and the Pacific Ocean. Suisun Marsh is widely used for various recreational activities and is a major stop for migratory birds on the Pacific Flyway. The Air Force has completed an initial assessment of the base and is currently working on a remedial investigation/feasibility study (RI/FS) to determine the type and extent of contamination and identify alternatives for remedial action. The RI/FS report, scheduled to be released in the summer of 1989, was delayed to permit further investigation into the cause of a swelling affliction noted in horses and in humans in contact with horses in a grazing area of the base. Status November 21, 1989: Work on the RI/FS report continues.

RCRA Info Corrective Action Summary:

Event: Stabilization Measures Evaluation, This facility is not amenable to stabilization activity at the present time for reasons other than 1) it appears to be technically infeasible or inappropriate (NF) or 2) there is a lack of technical information (IN). Reasons for this conclusion may be the status of closure at the facility, the degree of risk, timing considerations, the status of corrective action work at the facility, or other administrative considerations.  
Event Date: 04/07/1998

Event: Current Human Exposures under Control, Yes, Current Human Exposures Under Control has been verified. Based on a review of information contained in the EI determination, current human exposures are expected to be under control at the facility under current and reasonably expected conditions. This determination will be re-evaluated when the Agency/State becomes aware of significant changes at the facility.  
Event Date: 04/07/1998

Event: Migration of Contaminated Groundwater under Control, Unacceptable migration of contaminated groundwater is observed or expected.

## EPA Waste Codes Addendum

Code	Description
D001	IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
D002	A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

## FEDERAL RECORDS

### **NPL: National Priority List**

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

### **DELISTED NPL: National Priority List Deletions**

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

### **NPL LIENS: Federal Superfund Liens**

Federal Superfund Liens. Under the authority granted the USEPA by the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner receives notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

### **CERCLIS:** Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

### **CERCLIS-NFRAP:** CERCLIS No Further Remedial Action Planned

As of February 1995, CERCLIS sites designated "No Further Remedial Action Planned" (NFRAP) have been removed from CERCLIS. NFRAP sites may be sites where, following an initial investigation, no contamination was found, contamination was removed quickly without the need for the site to be placed on the NPL, or the contamination was not serious enough to require Federal Superfund action or NPL consideration. EPA has removed approximately 25,000 NFRAP sites to lift the unintended barriers to the redevelopment of these properties and has archived them as historical records so EPA does not needlessly repeat the investigations in the future. This policy change is part of the EPA's Brownfields Redevelopment Program to help cities, states, private investors and affected citizens to promote economic redevelopment of unproductive urban sites.

### **RCRA:** Resource Conservation and Recovery Act Information

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS). The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month. Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. Transporters are individuals or entities that move hazardous waste from the generator off-site to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

## **US BROWNFIELDS:** A Listing of Brownfields Sites

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

### **UMTRA:** Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

## **RAATS:** RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

### **DEED:** Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

## **HAZNET:** Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method.

## **EDR PROPRIETARY RECORDS**

### **Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants**

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

## OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

**Oil/Gas Pipelines:** This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

**Sensitive Receptors:** There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

Longitude (West):	121.9903 - 121° 59' 25.1"
Universal Tranverse Mercator:	Zone 10
UTM X (Meters):	588359.7
UTM Y (Meters):	4232986.0
Elevation:	15 ft. above sea level

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

# GEOCHECK<sup>®</sup> - PHYSICAL SETTING SOURCE SUMMARY

## GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

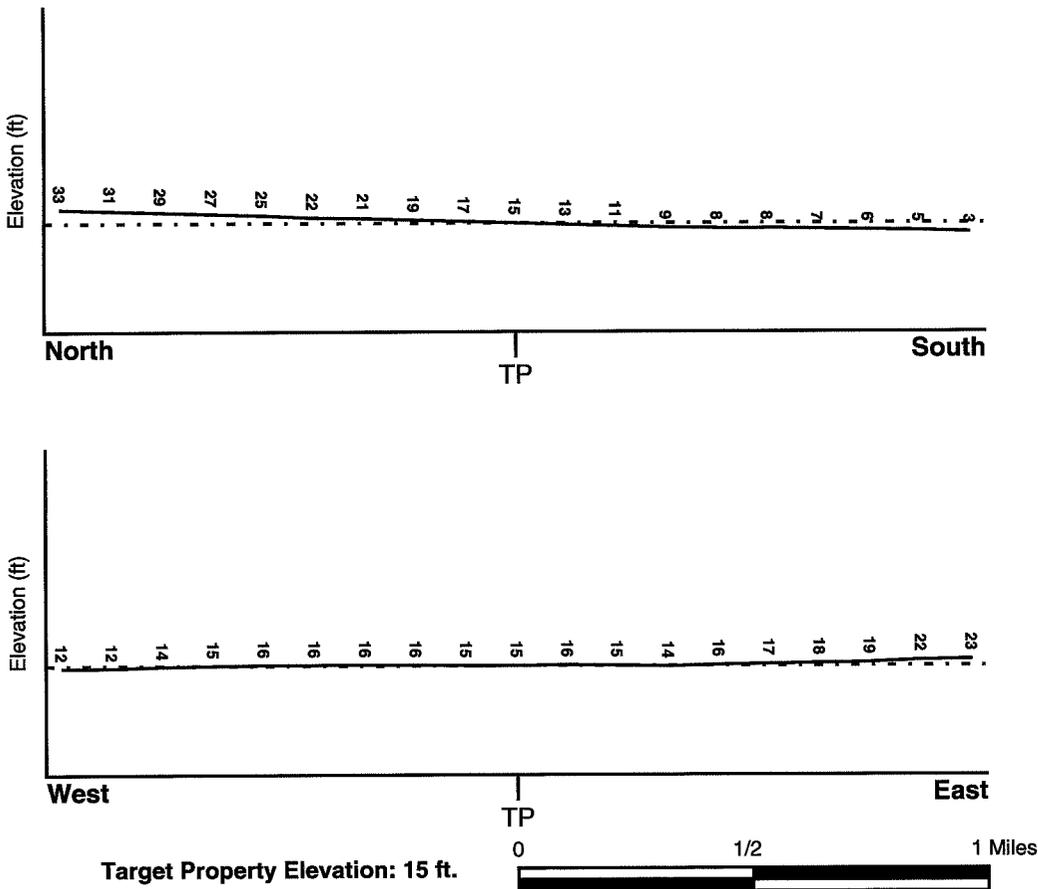

## TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

## TARGET PROPERTY TOPOGRAPHY

USGS Topographic Map: 38121-B8 DENVERTON, CA  
 General Topographic Gradient: General South

## SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Target Property Elevation: 15 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

## HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

## **GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY**

### **GROUNDWATER FLOW VELOCITY INFORMATION**

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

### **GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY**

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

## DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

### Soil Map ID: 1

Soil Component Name: PESCADERO

Soil Surface Texture: clay loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Somewhat poorly. Soils commonly have a layer with low hydraulic conductivity, wet state high in profile, etc. Depth to water table is 1 to 3 feet.

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: HIGH

Depth to Bedrock Min: > 0 inches

Depth to Bedrock Max: > 0 inches

## TOPOGRAPHIC INFORMATION

### **USGS 7.5' Digital Elevation Model (DEM)**

Source: United States Geologic Survey  
EDR acquired the USGS 7.5' Digital Elevation Model in 2002. 7.5-Minute DEMs correspond to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps.

## HYDROLOGIC INFORMATION

**Flood Zone Data:** This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

**NWI:** National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 from the U.S. Fish and Wildlife Service.

## HYDROGEOLOGIC INFORMATION

### **AQUIFLOW<sup>®</sup> Information System**

Source: EDR proprietary database of groundwater flow information  
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

Source: Department of Agriculture, Natural Resources Conservation Services  
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

**APPENDIX E**  
**SOIL SAMPLING PROTOCOL**  
**LABORATORY ANALYTICAL RESULTS**

Near-surface soil samples for laboratory analysis were collected using hand-sampling equipment on February 14, 2006 in brass liners, the ends covered in Teflon tape, taped, then labeled with a unique identification number, placed in an ice-chilled cooler, and transported to a state-certified analytical laboratory with chain of custody documentation.

All sampling equipment was cleaned in a solution of laboratory grade detergent and distilled water before use at each sampling point.

Dear Peter Langtry:

Torrent Laboratory, Inc. received 7 samples on 2/14/2006 for the analyses presented in the following report.

All data for associated QC met EPA or laboratory specification(s) except where noted in the case narrative.

Torrent Laboratory, Inc. is certified by the State of California, ELAP #1991. If you have any questions regarding these tests results, please feel free to contact the Project Management Team at (408)263-5258;ext: 204.

Sincerely,

  
Laboratory Director

**Definitions, legends and Notes**

Note	Description
ug/kg	Microgram per kilogram (ppb, part per billion).
ug/L	Microgram per liter (ppb, part per billion).
mg/kg	Milligram per kilogram (ppm, part per million).
mg/L	Milligram per liter (ppm, part per million).
LCS/LCSD	Laboratory control sample/laboratory control sample duplicate.
MDL	Method detection limit.
MRL	Modified reporting limit. When sample is subject to dilution, reporting limit times dilution factor yields MRL.
MS/MSD	Matrix spike/matrix spike duplicate.
N/A	Not applicable.
ND	Not detected at or above detection limit.
NR	Not reported.
QC	Quality Control.
RL	Reporting limit.
% RPD	Percent relative difference.
a	pH was measured immediately upon the receipt of the sample, but it was still done outside the holding time.
sub	Analyzed by subcontracting laboratory, Lab Certificate #

**RE: SUMMARY OF RESULTS OF NORTHWEST INFORMATION CENTER RECORDS  
SEARCH: 23-ACRE PARCEL, SUISIN CITY, CALIFORNIA**

Dear Mr. Langtry:

Thank you for the opportunity to be of service to you on this project. Per your request, TRC contacted the Northwest Information Center (NWIC), Sonoma State University, to conduct a review of pertinent records regarding cultural resources for the above referenced property. Records and resources consulted during the review included the following:

- Denverton, Fairfield North, Fairfield South, and Elmira 7.5' Quadrangles depicting recorded cultural resources and locations of previous technical studies;
- Office of Historic Preservation Historic Properties Directory;
- 1867, 1872, and 1908 Historic Period maps;
- 1853 GLO Plat Map, T5N, R1W;
- The California Inventory of Historic Resources; and,
- The California Historic Landmarks Listings.

A review of the quadrangles shows that numerous cultural resources technical studies have been conducted within a one-mile radius of the project location, several of which included portions of the subject property. In 1980, a narrow swath along the south side of Pederson Road was surveyed as part of a larger aqueduct survey<sup>1</sup>. No historic resources were recorded on the subject property along that portion of the survey. Another linear survey<sup>2</sup> conducted in 1993 included portions of the subject property adjacent to Highway 12. The actual survey alignment included a substantial portion of the subject property northeast of Highway 12. No historic resources were recorded on the subject property from that survey. An additional five cultural resources surveys have been conducted within a one-mile radius of the subject property but did not cover any portion of the subject property. No historic resources have been recorded on or within a one-mile radius of the subject property as a result of these surveys. Several acres in the

northeast corner of the property have not been surveyed and it is unknown if historic resources exist in that portion of the subject property.

The Office of Historic Preservation Historic Properties Directory provides addresses of numerous historic properties in Suisin City. The list shows several historic properties exist along Walters Road north of the property, but none are within or adjacent to the subject property. No California Historic Landmarks are recorded within one mile of the subject property.

A review of historic period and plat maps shows the subject property in an undeveloped marshlands portion of Solano County until the 1950s. Subsequent land use appears to have consisted primarily of agricultural activities until relatively recently. No structures appear on the 1953-1980 Denverton Quadrangles during that time period.

Thank you for the opportunity to assist you with this project, if I can be of further assistance please contact me at your earliest convenience.

Respectfully submitted,
